CLIMATE TARGETS

Australian Government

- 26-28% reduction by 2030 on 2005 levels
- Net zero by 2050 pledged

Fonterra

- 30% reduction by 2030 and net zero by 2050

Nestlé

- 50% reduction by 2030 and net zero by 2050

Unilever

- 50% reduction in GHG emissions for products by 2030 and net zero emissions for all products from source to point of sale by 2039

ADIC target:

30% reduction in emissions intensity, across both farm and manufacturing, by 2030 (relative to 2015 baseline)

International dairy sector declaration:
Pathways to Dairy Net Zero
(commitment to action)

INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE SIXTH ASSESSMENT REPORT 2022

IPCC, 2022: SUMMARY FOR POLICYMAKERS [H.-O. PÖRTNER, D.C. ROBERTS, E.S. POLOCZANSKA, K. MINTENBECK, M. TIGNOR, A. ALEGRÍA, M. CRAIG, S. LANGSDORF, S. LÖSCHKE, V. MÖLLER, A. OKEM (EDS.)]. IN: *CLIMATE CHANGE 2022: IMPACTS, ADAPTATION, AND VULNERABILITY*. CONTRIBUTION OF WORKING GROUP II TO THE SIXTH ASSESSMENT REPORT OF THE INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE [H.-O. PÖRTNER, D.C. ROBERTS, M. TIGNOR, E.S. POLOCZANSKA, K. MINTENBECK, A. ALEGRÍA, M. CRAIG, S. LANGSDORF, S. LÖSCHKE, V. MÖLLER, A. OKEM, B. RAMA (EDS.)]. CAMBRIDGE UNIVERSITY PRESS. IN PRESS.

SSP = an emissions scenario and likelihood of adaptation

Since such steep mitigation is impossible, the only way to achieve this budget is with very large "negative" emissions: pulling CO₂ out of the atmosphere.

“Societal choices and actions implemented in the next decade determine the extent to which medium- and long-term pathways will deliver higher or lower climate resilient development (*high confidence*).”

CLIMATE WILL CONTINUE TO DRAG PRODUCTIVITY

CSIRO report considered current policies and ‘delayed transition’ scenario and the implications for agriculture sector:

- Agriculture production will decline (10-15% difference)
- Impacts will vary across locations
- Increased demand combined with adaptation and resilience measures can mitigate economic impacts for crop and livestock production
- Note: Shifts in rainfall not included in analysis of chronic/acute impacts

MITIGATION - UNDERPINNING RESEARCH TO REDUCE ON-FARM EMISSIONS

- **Marginal Abatement Cost Curve** (roadmap for emissions reduction for the dairy industry; calculates cost of abatement over lifetime of measures: in development)
- **Update to carbon calculator and increase adoption** (to accumulate industry-level data for market assurance, government accounts and to better target on-farm management strategies)
- **Promote options to reduce emissions** (particularly those with productivity co-benefits)
- **Identify innovations in enteric methane research** (open call grant process)
- **Low-methane cows** (DairyBio animal breeding program)

DO NOW

- **Animal management**
(health/fertility/heat stress/herd longevity)
- **Breeding** (genetic gain in plants/animals)
- **Supplements/diet manipulation**
(oils/tannins e.g. grape marc)
- **Legumes** (Leucaena, Lucerne, Vetch, Lotus)
- **Good practice effluent, drainage, soil, and fertiliser management**
- **Energy efficiency and use of renewables**
- **Tree plantings, e.g. shelterbelts**
- **Supply chain expectations....**
 - Know your baseline (ADCC)

DO IN 5 YEARS

- **Vaccine**
- **Methane inhibitors** (seaweed, 3-NOP)
- **Early life programming**
- **Wearable devices?**
- **Further breeding innovations**

Australian Dairy Carbon Calculator

The Australian dairy industry is committed to a 35% reduction in greenhouse gas (GHG) emissions intensity across the dairy supply chain based on 2010/11 levels. To track industry progress Dairy Australia has developed a GHG accounting tool linked to DairyBase called the Australian Dairy Carbon Calculator. This tool enables farmers, advisers and industry to estimate emissions on farm and identify areas where there are opportunities for improvement.

Farm data from Dairybase is used to pre-populate the carbon calculator, saving time entering data. The carbon calculator provides a breakdown of emissions sources and potential abatement strategies.

Measuring actual emissions on farm is expensive and the Australian Dairy Carbon Calculator is an internationally recognised tool that can be used to estimate on farm emissions. It can also be used to estimate the impact of changes in management practices on emissions.

- Breakdown of each source of emissions
- Comparing results to industry average
- List of strategy resources
- Hyperlinked to resources

close

Herd and breeding management can reduce enteric methane emissions and methane and nitrous oxide emissions from dung and urine. Strategies include:

- Extending herd longevity to reduce replacement rates.
- Identifying and culling less productive animals.
- Getting cows in calf, on time, every time.

Program logic behind the *DA Climate Change RD&E Strategy 2020-25*

Practice areas

Adaptation

Mitigation

Natural capital and climate risk

Targets

Profitable adaptation strategies to mitigate climate change

30% reduction in greenhouse gas emission intensity

Investment capital recognises the Australian dairy industry is successfully adapting to climate change

Key investment priorities

- Understanding climate impacts vary for each region (*Dairy Businesses for Future Climates*)
- Mitigating heat stress
- Heat alert service & Cool Cows resources
- Preparedness for extremes (*Forewarned is Forearmed - MCV*)
- Genetic improvement of plants and animals (DairyBio)

- Profitable abatement strategies
- Emissions intensity reporting – DairyBase Carbon Calculator uptake: Know Your Baseline
- GWP* and international linkages
- Level of ambition required by markets

- Market sustainability expectations
- Sustainability guidelines relevant to Australian dairy systems
- Sustainability reporting
- Participation in carbon and biodiversity markets

Policy development considerations/opportunities

- Adaptation
 - On-farm measures to counter physical climate risk and bolster farm productivity
- Mitigation
 - Role of different GHGs e.g. methane
 - Ambition of ADIC target in Sustainability Framework
 - Driving uptake of footprinting/baseline numbers at farm level
 - Emissions reduction farm action plans
 - Participation in carbon markets

Key advocacy audience:
governments, investors and
banks

Key advocacy audience:
markets, consumers, investors,
banks and governments

How can DA support SADA
policy development?

Key resources 2021/22:

- Marginal Abatement Cost Curve
- Australian Dairy Carbon Calculator
- Energetics adaptation scenario modelling
- Scientific consensus on methane (MLA)
- MJA Productivity study pointing to R&D
- BDO multipliers detailing economic contribution
- Carbon & Biodiversity Markets webinar
